< Remarks > ■ : Attached via Mount Base etc. □ : Directly attached on a housing ★ : Attachable ○ : Usable △ : Some operational limitation is applied — : Not compatible ▲ : To be confirmed × : Not usable

- ※ A Z-240 / D-2000 / D-2000W / D-2000Wn only. D-2000S / S-2000 is not equipped with External Auto mode.
- ※ B For camera that cannot set aperture value or ISO sensitivity, external Auto mode requires to predict camera operation in a particular shooting condition based on [aperture range] [ISO sensitivity range] to make appropriate strobe setting.
- ※ C S-TTL Auto mode is not usable when built-in flash mode is set to [Slave].
- ※ D S-TTL Auto mode is not usable when camera shooting mode is set to [M Manual].
- ※ E [S-TTL Auto] works without any problem but [Manual mode] and [External Auto mode] has operational limitation. More than -1.0 EV setting in Manual mode and actual flash output beyond -1.0 EV on External Auto mode is not usable. This is because built-in flash characteristic where time-lag between [pre-flash] and [main flash] is beyond Advanced Cancel Circuit control range and always has to set it to [OFF].
- ※ F S-TTL Auto is not usable since the camera is non-preflash type. Use Manual/External Auto mode.
- ※ G S-TTL Auto could get less accurate depending on shooting condition. Use External Auto or Manual in such a case.
- ※ H S-TTL Auto mode is not usable when built-in flash mode is set to [Manual].
- ※ I Compatible Optical D Cable Type L/Cap Set is not usable with Shoe Base. Please use wireless connection.
- ※ J Optical D Cable Type L/Double Hole Rubber Bush Set is not usable with 28AD Mount Base PT-045/047.
- ※ K When using shooting mode [M Manual]/[A Aperture priority], the S-TTL Auto works fine with aperture setting range F9 through F16. Except this setting, S-TTL Auto could get less accurate. In such case, please use External Auto or Manual mode.
- ※ L Set camera [RC Mode] to OFF when using INON strobe.
- ※ M When shooting with [S-TTL Auto mode], images will get slightly underexposed in all shooting range. Use flash compensation function of the camera to set flash compensation value between +0.7 EV and +1.0 EV.
- ※ N When shooting with [Manual], or [External Auto mode] (D-2000/Z-240), deactivate Advanced Cancel Circuit Switch and set camera's built-in flash to Manual mode. If camera's built-in flash is set to auto-metering (force flash) mode, external strobe flash range more than -1.5 EV in [Manual mode] or actual flash out-put more than -1.5EV in [External Auto mod] (D-2000/Z-240) is not usable.
- ※ O Electrical connection compatible strobe is Z-240 / D-2000W / D-2000Wn only. D-2000 / D-2000S / S-2000 does not have synchro connector to support electrical connection.
- ※ P When using electrical connection underwater, D-2000W allows change over between [TTL Auto] and [Manual + TTL Auto] only. Changing over between [TTL Auto] and [Manual] or [Manual + TTL Auto] and [Manual] underwater is not supported since specific setting on land is required in those operation (Optical connection or land operation does not have these limitations). D-2000Wn / Z-240 allows change-over between all compatible flash modes.
- ※ Q A housing with optional [Target Light installation] is equivalent to X1-LZ and supports electrical connection.

- ※ I S-TTL Auto accuracy gets decrease with aperture setting F2.8 or greater.
- ※ IV S-TTL Auto is not usable for wireless connection since a Camera Mirror can not be attached in front of built-in flash. Use optical cable connection for S-TTL Auto.
- ※ VI Wireless connection is not usable since Mount Base blocks reflecting light from a camera mirror. Use Optical Cable connection.
- ※ VII S-TTL Auto accuracy could get decrease depending on shooting condition. In such case, use External Auto/Manual mode.
- ※ IX S-TTL Auto is not usable since the camera is non-preflash type. Use Manual/External Auto mode.
- ※ X Unable to attach Camera Mirror. Use Optical Cable connection.
- ※ XII [S-TTL Auto] works without any problem but [Manual mode] and [External Auto mode] has operational limitation. More than -1.0 EV setting in Manual mode and actual flash output beyond -1.0 EV on External Auto mode is not usable. This is because built-in flash characteristic where time-lag between [pre-flash] and [main flash] is beyond Advanced Cancel Circuit control range and always has to set it to [OFF].
- ※ XIII The Shoe Base can be attached only via optional compatible Mount Base.
- ※ XIV When using shooting mode [M Manual]/[A Aperture priority], the S-TTL Auto works fine with aperture setting range F9 through F16. Except this setting, S-TTL Auto could get less accurate. In such case, please use External Auto or Manual mode.

- ※ 1 [Dome Spacer for UWL-100 28AD] is required to attach the Dome Lens Unit for UWL-100.
- ※ 2 [PT Housing 67mm Adapter Ring (For UWL-100 Type1 to PT-005/005s/007/010)] is necessary.
- ※ 3 Type conversion is recommended to get better image quality.
- ※ 4 Slightly vignetting in image corners at zoom wide end. Slightly zoom to telephoto side or crop the image after taking image.
- ※ 5 Significant vignetting can be observed on image corners at zoom wide end. Zoom to telephoto side or crop the image after taking image.
- ※ 6 Vignetting possibility to be examined.
- ※ 7 Slightly vignetting on corners at zoom wide end. Crop vignetting after taking image.
- ※ 8 [Grip Base D4] / [M67 Lens Arm] etc. is necessary.
- ※ 9 Extremely minute vignetting part in one of image corners at wide end may be observed.
- ※ 10 Significant vignetting on either side of an image at zoom wide end even underwater due to optical axis misalignment between the camera and underwater housing. Use zoom middle range towards to telephoto side
- ※ 11 There is vignetting at wide end on land/underwater. Crop an image after shooting or zoom to telephoto side until no vignetting is observed.
- ※ 12 Please refer to attachment lens product brochure or INON web site for detail of specification including vignetting etc of wide lens and combination with super wide lens.
- ※ 13 Olympus [Macro Lens Adapter PMLA-01] is necessary.
- ※ 14 Olympus [Macro Lens Adapter PMLA-EP01] is necessary.
- ※ 15 When using a close-up lens, significant vignetting will be observed at zoom wide end. Zoom towards to telephoto side little bit to avoid vignetting.
- ※ 16 On land, slight vignetting on image corners at zoom wide end even without a close-up lens. Zoom to telephoto side until no vignetting is observed or use without the lens adapter unit.
- ※ 17 On land/underwater, slight vignetting on image corners at zoom wide end even without a close-up lens. Zoom to telephoto side until no vignetting is observed or use without the lens adapter unit.
- ※ 18 [M67-LD Mount Converter for UCL-330/165M67] is necessary.
- ※ 19 [AD-LD Mount Converter for UCL-165AD] is necessary.
- ※ 20 [AD Mount Converter for UCL-165AD] is necessary.
- ※ 21 Significant vignetting on image corners on land and underwater at zoom range from wide end to middle. Zoom to telephoto side to eliminate vignetting.
- ※ 22 [MRS Olympus 50 Port] is necessary.
- ※ 23 [MRS60 Port], [MRS60 Port II], [MRS100 Port TypeU II], [MRS100 Port TypeU III], [Front Port Macro], [Pancake Port] or [M67 Adaptor for Front Port Wide] is necessary.
